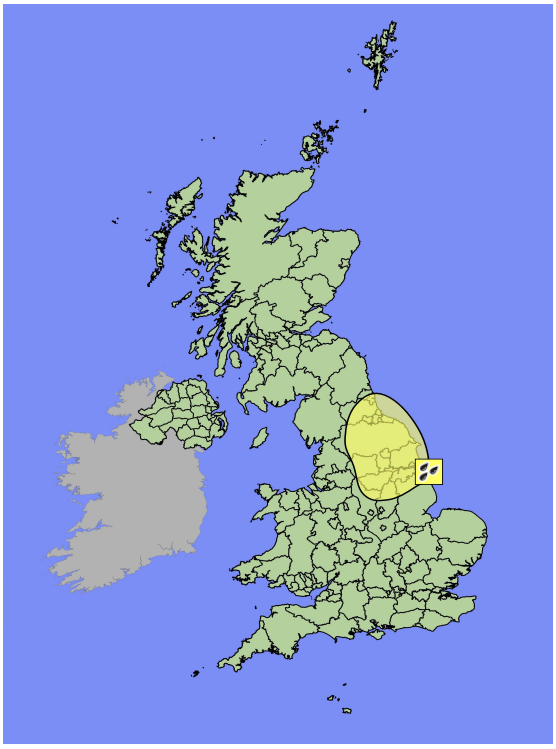
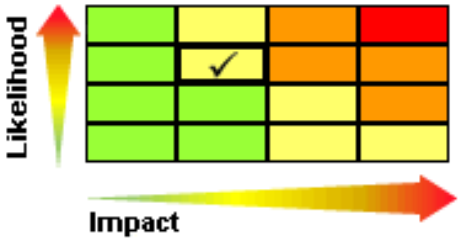
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system is expected to become slow moving across northern parts of England and the Midlands. Whilst the rain is not expected to be particularly heavy, the persistence of the rain will allow accumulations to build up, especially in uplands areas such as the Pennines and Peak District. Around 10-20 mm is expected to fall widely and there is a risk of up to 40 mm locally over high ground. Given the saturated nature of the ground, some localised flooding is possible.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **03:00 on Mon, 26th Nov 2012** until **23:59 on Mon, 26th Nov 2012**

Persistent, occasionally heavy rain, is expected to affect parts of northeast England and the east Midlands during Monday. The heaviest rain is likely to be during the morning, with the rain tending to ease later in the day. The public should be aware of the possibility of localised flooding.
